

WEBSITE DEVELOPMENT BRIEF

A practical handoff document for the Jatoe Systems website

CORE POSITIONING

Jatoe Systems teaches technology, builds technology, and turns engineering ideas into useful products.

Prepared for the Website Development Team

1. Website Direction

The website should present Jatoe Systems as a serious engineering, technology and innovation company - not only a robotics training organisation. It should be clean, modern, visual and easy to understand on both mobile and desktop.

WHAT THE WEBSITE MUST DO

- Introduce Jatoe Systems clearly
- Show products and projects
- Present STEM and robotics programs
- Show engineering capabilities
- Generate product, school and partnership enquiries
- Prepare the business for future e-commerce

BRAND FEEL

- Modern
- Engineering-focused
- Professional
- International
- Confident
- Clean and not overcrowded

2. Brand and Visual Style

Use the finalized Jatoe Systems logo. The main colour direction should come from the current logo: deep navy supported by a bright technology blue, white, and light neutral backgrounds.

Deep Navy
#0B3768

Tech Blue
#1489C9

White
#FFFFFF

Light Background
#EEF6FB

3. Homepage

Suggested hero headline: Engineering Ideas Into Real-World Solutions

Suggested support text: Jatoe Systems is an engineering and technology company focused on developing practical products, training the next generation of innovators, and turning ideas into solutions.

Primary buttons: Explore Our Work | Contact Us

The homepage should quickly preview Products, STEM & Robotics, Engineering Projects, Innovation Initiatives, and Latest Work.

4. About Jatoe Systems

Jatoe Systems is being built as a broad engineering and technology company. Our work can combine electronics, robotics, embedded systems, product development, mechanical and fabrication work, IoT, software, STEM education, 3D printing, and engineering research and innovation.

VISION

To build a globally respected engineering and technology company that transforms ideas into useful products and creates solutions to real-world problems.

MISSION

To develop practical technology, build innovative products, train future problem-solvers and create an environment where engineering ideas can grow into real solutions.

AIM

To connect engineering education, product development and innovation under one ecosystem where people can learn, build and create.

5. Main Areas of Jatoe Systems

Engineering & Product Development

Designing and developing useful physical technology products.

STEM & Robotics Education

Practical technology training for children and young people.

Software, Embedded Systems & IoT

Developing connected devices, applications and intelligent systems.

Innovation & Engineering Experiences

Competitions, challenges, workshops and events that make engineering exciting.

6. Products

Create a dedicated Products page. Products that are not ready for sale must be clearly labelled "In Development" so the website stays credible.

Jatoe Stacked Extension Board

In Development

- Four universal sockets
- Individual switches
- 3 m cable
- Designed around safety, reliability and affordability

Affordable STEM Robotics Kit

In Development

- For children and students
- Target price around or below GH¢100
- Hands-on, affordable STEM learning

Portable Study Lamp

In Development

- Student-focused lighting product
- Portable and affordable
- Design and product concept still to be developed

Bench Power Supply

Concept / In Development

- For students, technicians, makers and electronics hobbyists
- Product concept now entering development

3D-Printed Soldering / PCB Holder

Concept / In Development

- Holds PCBs, wires or components while soldering
- Designed to be simple, stable and affordable

7. Projects / Innovation Page

Use this page for experiments, prototypes and engineering work across robotics, electronics, embedded systems, IoT, 3D printing, product experiments and research.

Each project should eventually include: picture, project title, short description, problem being solved, and current status.

8. STEM & Robotics Page

Explain Jatoe Systems as a provider of practical technology education for Primary pupils, JHS students and graduates, and SHS students and graduates.

- Electronics
- Arduino
- Robotics
- MIT App Inventor
- Programming
- Engineering design
- 3D printing
- IoT
- Project building

Main call-to-action: Partner With Us - mainly for schools and organisations interested in training.

9. Innovation Events

Create an Innovation Events section for future competitions and experiences. One planned initiative is a robot combat competition where teams design, build, repair and compete with robots. Position it as a combination of engineering, competition, creativity, entertainment and practical learning.

Status: Concept / In Development

10. Team Page

The Team page can eventually display each member's name, role, photo and short skill description. Do not publish ownership or shareholder information unless there is a future legal/business reason to do so.

11. Contact Page

Include the official company email, phone/WhatsApp number, social media links, location and a contact form once the final details are confirmed.

- Product enquiries
- School partnerships
- Engineering projects
- Sponsorship
- Partnerships
- Joining the team

12. Website Navigation

Home	About	Products	Projects	STEM & Robotics	Team	Contact
------	-------	----------	----------	-----------------	------	---------

A Shop section can be added later when online sales are ready. Build the site architecture so e-commerce can be added without rebuilding the whole website.

13. Required Website Features

Mobile responsive	Fast loading	WhatsApp contact button	Clear calls-to-action
High-quality images	Social media links	Working contact form	Easy to update
Secure setup	Basic SEO	Professional domain	Future e-commerce ready

14. Content Style

Avoid long paragraphs. Use strong headlines, short explanations and real visuals of projects. Jatoe Systems should sound confident, simple, professional, innovative and engineering-focused.

15. Information Still Needed Before Launch

- ☐ Final logo files in web-ready formats
- ☐ Official company email
- ☐ Phone / WhatsApp number
- ☐ Social media links
- ☐ Exact location
- ☐ Team member information
- ☐ More product photos
- ☐ Real project photos / videos
- ☐ Final extension board specifications
- ☐ Final prices when confirmed

Developer Handoff - Final Rule

BUILD WHAT IS TRUE TODAY

Make the website professional, but clearly separate what is launched from what is still in development. Credibility matters more than looking bigger than we are.

Jatoe Systems - Engineering Ideas Into Real-World Solutions
